

Mulch, Rock, & Soil Calculator

How to Figure The Area Of Your Landscape Beds or The Area You Want To Add Mulch, Soil, Sand, Gravel or Rock:

1. With a measuring tape, measure how many feet long the bed is. Then measure how many feet wide. Multiply these two figures. The total is the square foot area of that landscape bed.
2. Decide how thick you want your mulch to be (2" is average). For new landscape beds, 3" - 4" of mulch is recommended. If you are just top dressing a previously mulched bed, you may wish to use as little as 1" of mulch. Using the conversion chart below, you can figure how many cubic yards or bags of mulch, soil or gravel you may need.
3. If you still have questions, please call our office at (321) 279-9913. *If you have the total area of your landscape beds calculated, we'd be glad to help you figure the amount of mulch, soil or gravel you will need.*
